Abstract of EP0655238

The invention relates to a process for preparing liposomes, which consists in: - bringing one or more lipid (s) and one or more surfactant(s) into contact in an aqueous medium so as to form mixed aggregates composed of the lipid(s) and the surfactant(s), at least one of the surfactant(s) being an enzyme substrate; - removing the surfactant(s) partially or completely by means of one or more enzyme(s) to form lipid vesicles.
